

About the app

This app streamlines the process of importing data from Microsoft Excel into the General Journal, requiring no setup or predefined templates. With advanced AI-driven recognition, the app intelligently matches Excel columns to journal fields based on their names, even if they don't align perfectly. The AI technology ensures seamless identification of the correct columns, eliminating the need for manual adjustments or precise naming conventions. Simply upload your Excel file, and the app automatically detects and matches the relevant columns, ensuring accuracy and saving valuable time. With its advanced capabilities, the app simplifies data management, allowing users to focus on their core tasks without interruptions.
